

POWERCUBE III PC

A SMALL FORM FACTOR COMPUTER WITH
BIG PERFORMANCE

Reclaim your space with the InfoLogix PowerCube III PC. It's only 6.5 inches square and less than 2 inches high, so while its size might go unnoticed, its combination of performance and power savings always stand out. Plus, when compared against other small form factor PCs, the PowerCube III outlasts the competition with almost 20% longer runtime while integrated on a mobile computer cart.

The Ideal Computer for Mobile Healthcare Use

With the increasing value of mobile computing at the point of care, it's important for hospitals to find a solution that's tailored for mobility. Weight, size, power and performance should be considered when choosing a mobile device that fits your workflow. Standard desktops are large and heavy while laptops can be expensive and duplicate existing resources like monitors and keyboards.

The PowerCube III provides powerful PC computing that doesn't take up valuable desktop space, fits where other desktop computers can't and uses less power than the competition. When space matters, the PowerCube III is the solution.

A Versatile Option for Your Hospital

Consider the possibilities for your hospital with PowerCube III and its super small footprint. It fits into mobile computer carts like the InfoLogix ST7 Workstation to create the perfect mobility solution. For wall-mounted PC cabinets like the InfoLogix ST7 Wall Mount, the PowerCube III brings substantial computing power into a narrow space. For fixed applications like a nurses' station, the PowerCube III frees up workspace.

Every shift, the PowerCube III allows nurses and their carts to remain productive on the floor for longer rather than having to recharge their cart. Just imagine how much time that saves, every cart, every shift, every day.

PowerCube III PC Highlights

| |
|--|
| Processor: Intel 2.2 GHz |
| Memory: 2GB RAM standard, upgradeable to 4GB |
