

The Winola Lake Mobile Caregiver Platform Workstation

Optimizing Clinical Workflow and Patient Care Levels

- Clinically tested for superior ergonomics
- Multiple configurations to meet clinicians' needs
- Adjustable surfaces & heights for maximum comfort
- Lightweight, sturdy, quiet & maneuverable
- Longer battery run times & one hour recharge with the Mobile Caregiver LiFe Battery

The New Revolution in **Clinical Workflow Optimization**

Traditional mobile workstations have transformed the day-to-day workflow of clinicians in hospitals around the world. By providing direct access to EMR systems and clinical documentation modules, carts have brought information to the point of care where it can provide the most benefit.

However, many hospitals have uncovered the limitations of their carts: short battery life and long recharge times, cumbersome designs that are not ergonomically friendly, and build issues that make carts unstable and noisy. The Winola Lake Mobile Caregiver Platform Mobile Workstation plays a key role in our end-to-end strategy for EMR implementation and mobilization.

A Better Cart for Better Care

Designed through real-life testing in healthcare settings, the Mobile Caregiver Platform provides features and functionality for daily use with longer battery life and shorter recharge. This puts the Mobile Caregiver Platform Workstation in the hands

The **Winola Lake Mobile Caregiver Platform Workstation** is available in three configurations: Laptop, CPU, and CPU+. Above: Laptop configuration.

of clinicians, improving patient care, instead of being plugged in, losing valuable time.

From its lightweight size to its compact footprint, the Mobile Caregiver Platform Workstation is a computer cart that goes wherever clinicians go. With optional drawers, barcode scanner holder, and a customizable work surface and keyboard tray, the Mobile Caregiver Platform Workstation adapts to each clinician's needs quickly. Plus, because of the long-life Mobile Caregiver LiFe Battery, clinicians can keep a cart for an entire shift for greater efficiency.

Whether your hospital is new to computer carts or replacing existing carts, the Mobile Caregiver Platform Workstation is the ideal technology to optimize your workflow and Winola Lake is the ideal partner for your hospital's EMR and mobility needs.

By taking a holistic view of clinical workflow and how a solution should be engineered for the real-world challenges of healthcare, Winola Lake offers more than technology - we offer a total transformation of your hospital.

Mobile Caregiver Platform Features and Specifications

- Single hand height adjustment
- 44" work surface maximum height standing
- 16"x 17" wheel to wheel
- Four 4" single wheel swivel casters
- Weight: 90 lbs. to 115 lbs.
- Front and rear handles
- Height adjustable keyboard tray
- Tilting keyboard with ergonomically correct +/- 15 degree tilt
- Concealed cable management
- Tooled aluminum and steel with injection molded plastic
- Durable high quality powder coat finish

Configurations

- Laptop
- CPU
- CPU+

Mobile Caregiver LiFe Battery: Keeping Your Clinicians Empowered for a Full Shift

Through our national team of RNs, PharmD's and other clinicians working inside hospitals, we asked "how should battery technology be engineered in order to provide the ideal workflow for clinicians, at a lower total cost of ownership?" The answer was that battery charge time needed to be as short as possible to enable nurses to rely on their mobile workstation for an entire shift and beyond, uninterrupted.

With the Winola Lake Mobile Caregiver Lithium Iron Phosphate (LiFe) Battery, the Mobile Caregiver Platform Workstation can have uninterrupted power during a full shift, helping your clinicians do their jobs and increase patient satisfaction. The LiFe Battery recharges in about one hour with up to five times longer battery life than traditional batteries*.

Plus, the advanced technology of the LiFe Battery also provides superior cell protection, eliminates the safety risks of high temperature issues associated with other batteries and offers superior battery management software to protect data and boost productivity.

**Winola Lake has tested the LiFe Battery cells to be more than 5x the cycles of standard batteries.*

The Winola Lake Mobile Caregiver Platform

The Winola Lake Mobile Caregiver Platform Mobility Suite is designed by clinicians, for clinicians to provide the ideal solutions to improve workflows and enable better patient care. Through the Mobile Caregiver Platform Workstation, Wall Mount and Mobile Clinical Assistant (MCA), Winola Lake empowers your hospital to perform better every day.
